KSE 100 KSE 100 Index

PSX · DAILY

Close · Tue 3 Nov 2026: **168018.86** · **+0.87%** vs prior session (2026-11-02) · The index closes higher and presses against a crucial resistance, with breakout and reversal both still open.

THE SETUP

The analyst frames the KSE-100 as sitting at a crucial resistance, with the chart posing one question: breakout or reversal. The resistance the analyst is watching is **168,300**. Tuesday's close of **168018.87** came in above Monday's close of **166564.07**, so the index finished the latest session higher than the one before and just below that resistance. In the analyst's read, a decisive break above **168,300** that is sustained opens the way toward the next level overhead at **171,500**. If the index fails to sustain above the resistance, the analyst notes that renewed selling pressure could pull price back toward the **164,800** support level. In the analyst's words, the next direction depends largely on how the index reacts to this resistance zone.

LEVELS IN FOCUS

Next overhead level — **171,500**
The level the analyst identifies above the resistance if a breakout is sustained, a level to watch, not a forecast

Crucial resistance — **168,300**
The significant resistance the analyst is watching, where the breakout or reversal question is decided

Current position — **just below the resistance**
Tuesday's close sits just below the resistance the analyst is watching

WHAT TECHNICIANS WATCH FROM HERE

- **168,300 is the crucial resistance the analyst is watching**: a decisive close above it, rather than a brief touch that fades, is what a breakout looks like.
- **171,500 is the next level overhead the analyst identifies**: it becomes the relevant reference only if price sustains above 168,300.
- **A failure to sustain above 168,300** is the analyst's reversal case: renewed selling pressure would put the focus on how price behaves on the way toward 164,800.

LEVELS IN FOCUS (CONT.)

Support level **164,800**
The level the analyst names if the index fails to sustain above resistance and selling pressure returns

WHAT TECHNICIANS WATCH FROM HERE (CONT.)

- **164,800 is the support level the analyst names**: how price reacts if it gets there shows whether buyers step in or the pullback extends.

GENERAL CONCEPT · EDUCATION, NOT A VIEW ON THIS STOCK

KSE-100 at Crucial Resistance: Breakout or Reversal?

A resistance level is a price area where rising prices have previously slowed or turned back because sellers were active there. When an index approaches such an area, technicians focus on one question: does price break through and stay through, or does it stall and fall back. The word that matters is sustained. A brief push above resistance that closes back below is often called a false breakout, while a decisive close above it, ideally held over following sessions, suggests the area may be changing from a ceiling into a floor. The reverse case matters too. If price fails at resistance, attention shifts to the nearest support below, the area where buyers have previously stepped in. Comparing one session's close with the previous close adds context on whether momentum is building into the level or fading. Reading a chart this way means watching how price reacts at a key zone, not guessing the outcome beforehand.
