

KSE 100 KSE 100 Index

PSX · DAILY

Close · Mon 7 Sep 2026: **173636.07** · **-0.97%** vs prior session (2026-09-04) · a support break the analyst reads as confirming short-term weakness, with two lower levels now in focus.

THE SETUP

The analyst identifies a decisive break below the **174,500** support level, a level the analyst reads as confirming short-term technical weakness in the KSE-100. With that level breached, the analyst's immediate downside target now stands at **171,200**. The chart poses the question the analyst frames directly: does the index sustain above **171,200**, or does it fail to hold there, in which case the analyst identifies the next key support around **165,250**. The analyst's own framing is one of caution, watching price action around these levels before any fresh positioning.

LEVELS IN FOCUS

Broken support level

174,500

The level the analyst says has been decisively broken, now a level to watch for reference

Immediate downside target

at the close

The level the analyst identifies as the immediate downside target following the break

Next key support

165,250

The level the analyst expects to come into play if 171,200 fails to hold

WHAT TECHNICIANS WATCH FROM HERE

- ▶ **174,500** is the level the analyst says has been broken: whether price stays below it or reclaims it on a close is the first reference point.
- ▶ **171,200** is the immediate downside target the analyst identifies: whether the index sustains above it or fails to hold is the question the analyst frames as key.
- ▶ **165,250** is the next key support the analyst expects if 171,200 does not hold: it becomes a relevant reference only if that level gives way.
- ▶ Price action around these three levels is what the analyst says should be monitored closely before any fresh positioning is considered.

GENERAL CONCEPT · EDUCATION, NOT A VIEW ON THIS STOCK**KSE-100 at a Critical Juncture: 171,200 Holds the Key**

A support level is a price area where buying interest has previously been strong enough to halt a decline. When that level is broken decisively, meaning price closes clearly below it rather than briefly dipping through, technicians treat it as a shift in short-term structure: an area that used to attract buyers no longer holds, and the level itself can flip into overhead resistance if price tries to climb back. What follows a confirmed break is often a search for the next reference point below, since the market has to find a new area where buyers might step in again. This is why technical readers often lay out a sequence: an immediate level to watch first, and a further level that becomes relevant only if the first one also fails to hold. The discipline in this approach is not predicting where price must go, but identifying, in advance, the specific levels that would confirm continued weakness versus the levels that would suggest the decline is pausing or reversing.
