KSE 100

KSE 100 Index

PSX · DAILY

Close · Thu 6 Aug 2026: **181776.59** · **+0.98%** vs prior session (2026-08-05) · a breakout above the prior resistance zone, with the analyst watching whether the level now holds as support.

THE SETUP

The analyst identifies the key resistance zone of **178,000** to **179,500** that the KSE-100 Index broke above yesterday, a level the analyst had flagged in advance. Today's session, per the analyst's read, reinforced that bullish momentum with a further move higher. The chart now poses the question the analyst frames directly: does the index continue to sustain above this breakout zone, opening the path toward the next upside level the analyst identifies at **188,000**, or does it fail to hold and pull back toward **175,000** for a retest.

LEVELS IN FOCUS

Upside level the analyst is watching — **188,000**
The next structural level the analyst identifies if the breakout sustains

Breakout zone — **178,000-179,500**
The zone the analyst had identified in advance and which price broke above

Retest level — **175,000**
The level the analyst notes as a pullback and retest possibility if the breakout zone fails to hold

WHAT TECHNICIANS WATCH FROM HERE

- **178,000-179,500 is the breakout zone the analyst had flagged in advance**: whether the index continues to sustain above it, rather than slipping back into it, is what the analyst's read hinges on.
- **188,000 is the next upside level the analyst identifies**: it becomes the relevant reference point if the index holds above the breakout zone.
- **175,000 is the level the analyst notes for a possible pullback and retest**: a failure to hold above the breakout zone is what the analyst ties to this level coming back into play.

GENERAL CONCEPT · EDUCATION, NOT A VIEW ON THIS STOCK

Breakout Confirmed! KSE 100 Eyes the 188,000 Milestone

A breakout occurs when price moves decisively above a zone that had previously acted as a ceiling, a level where selling pressure had repeatedly capped advances. The significance is not the move itself but what happens afterward: technicians watch to see whether the old resistance zone starts acting as a new support floor. This is often described as role reversal. If price returns to the zone and holds, buying interest at that level reinforces the breakout as genuine. If price falls back through the zone without finding support, the move is often treated as a false breakout, and the zone reverts to acting as resistance. Because of this, a breakout is typically treated as unconfirmed until price demonstrates it can sustain above the zone over more than a single session, since a single strong move can sometimes reverse quickly.
